

Genesis Science Homeschool Chemistry Courses & Workshops

Is it time to teach your teen high school chemistry, college placement chemistry for the AP exam, or junior high physical science? Wondering how you're going to do it? Did you ever consider having a Doctor of Chemistry instruct your child in a small classroom setting?

Dr. Tony Barbosa will be offering year long junior high and high school chemistry classes beginning in the Fall of 2010. Classes can be customized for your group. Abbreviated classes and labs are also available on a weekly, bi-weekly or monthly basis. Workshops can be designed to meet your specific need. You name it and we'll do it. Chemistry and Physical Science courses will offer interactive classes and hands on laboratory experiments to delve into subject matter and rationale. Elementary programs available upon request.

Genesis Science offers science field trips, too. Students do not have to enroll in a class to participate. [Sign up](#) for our online newsletter to be notified about upcoming events.

Contact Dr. Barbosa to tailor a class for your group's needs in your area!
